Conditions

Categories and conditions

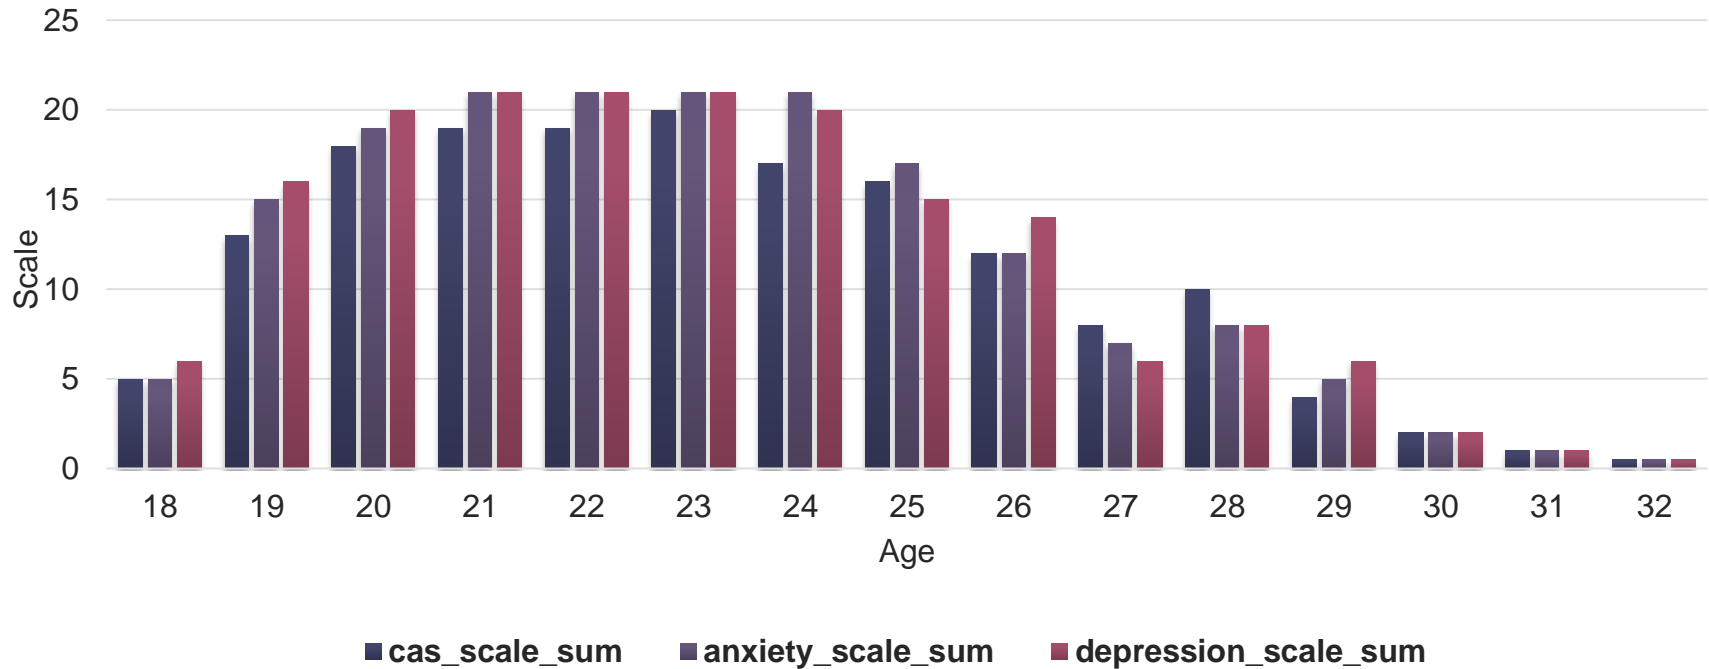

Model	Condition	Category
Covid Anxiety Scale	$\text{cas_scale_sum} > 8$	Positive
	$\text{cas_scale_sum} \leq 8$	Negative
Anxiety	$\text{anxiety_scale_sum} < 8$	Normal
	$8 \leq \text{anxiety_scale_sum} < 11$	Borderline Abnormal
	$\text{Anxiety_scale_sum} > 10$	Abnormal
Depression	$\text{depression_scale_sum} < 8$	Normal
	$8 \leq \text{depression_scale_sum} < 11$	Borderline Abnormal
	$\text{depression_scale_sum} > 10$	Abnormal

Features Importance

Features Importance of CAS Model

Features Importance of Anxiety Model

Features Importance of Depression Model

Discussion

Key Points of the Study

Psychological States

According to HADS, the psychological states reached a critical point, However anxiety level regarding COVID-19 is significantly low.

Related works similarities

Similar variables imposing significant impact on individuals psychotic states.

Models Performance

The CAS, Anxiety and Depression Model Performed better in Classification.

Models Prediction State

Higher Prediction scores recorded in Random Forest, XGBoot and XGBRF.

Conclusions

Summary of The Study

Research Questions

**Answers of These
Questions**
